

Outpatient Care

Huntington Centre Topaz Overduin's wish is to give tailor-made answers to the patients' needs. Thus we have developed a wide range of outpatient care services for patients in the early stages of HD and their professional and informal caregivers. The different care services enable patients to live their life according to their own lifestyle, experiencing quality of life and postponing residential care.

I have a question ...

My boss says I'm no longer functioning properly and wants to fire me. I don't want to tell I'm a mutation carrier. What can I do?

One of my patients had HD. He risks falling out of bed, however preferably we don't want to fixate him. Are there any alternatives?

I have been diagnosed with HD. Lately I'm experiencing increasing difficulties with concentration, both at work and at home. I don't sleep well, feel depressed and fall more frequently.

My husband has mood swings and can be very aggressive. According to him nothing is wrong. I don't know what to do. Please help me.

Based on my individual careplan I need specialized speech therapy.

I hardly ever leave my home anymore and miss activities and contact with others.

My wife needs my attention the whole day through, I don't have any time to myself. I can not continue like this. I really need some rest.

Topaz Huntington Centre Overduin's answers ...
